ABOUT US

Established in 1996, Y-pack packaging technology Co., Ltd. is a manufacturer that specialized in the research, development, and production of box and carton packing machine lines. We are located in Zhaoqing National High-tech Industrial Development Zone, covering an area of about 10,000 square meters. The company is a national high-tech enterprise integrating R&D, production, sales, and technical services. The company's R&D organization is recognized by Zhaoqing City Science and Technology Bureau as Zhaoqing City's Intelligent Packaging Machinery Engineering Technology R&D Center. It has successively obtained more than 40 national patents in the field of packaging machinery, and its R&D and production equipment and facilities are at the first-class level in the industry.

The company has long focused on the research and development of industrial production automation solutions and is one of the most professional manufacturers of industrial production automation solutions and machinery in China.

The company's products are divided into two major series: 1. Fully automatic carton (box) machine series; 2. Intelligent packaging production line series (planning, design, production, installation, and commissioning of the entire line). The industries involved include food, cosmetics, toys, communications, tobacco, and other fields. The company adheres to the "road of scientific and technological innovation", attaches great importance to the construction of a scientific research team, pays attention to technology research and development, and continuous product innovation.

Hengxinyuan packaging equipment uses intelligent control principles to reduce manpower and material resources in the packaging process and has won praise from users for its low energy consumption and high stability.

The company aims to improve customer production efficiency and reduce labor costs, with high-end intelligent equipment as the development direction and is determined to build a century-old enterprise and make long-term unremitting efforts to revitalize the intelligent equipment manufacturing industry and reduce the burden of the physical manufacturing industry.
